Program Description

This program provides students with a sound knowledge of Computer Aided Design and Drafting (CADD) through familiarization with the computer, peripheral devices and specialized software. The program prepares students to function as skilled CADD professionals who assist engineers and architects in all design and drawing preparation phases.

Program Goals

Upon successful completion of the CADD program students will be able to:

1. Create and revise CADD drawings.
2. Choose appropriate tools and techniques to produce effective and well organized CADD drawings.
3. Use industry terminology and standards.
4. Identify opportunities to improve productivity and accuracy and construct appropriate solutions.

Employment Information

CADD has generally replaced conventional drafting practices, with the number of CADD positions steadily increasing. Employment opportunities will continue to grow. Designers, architects, drafters, engineering technicians, and engineers will be required to operate CADD systems effectively and proficiently in order to be functional in their respective or prospective positions.

According to the *2016-2017 Occupational Outlook Handbook*, employment is expected to be approximately 200,000 by 2024.

Diversity Requirement

To satisfy the diversity requirement: Associate degree students must complete one 3-credit diversity course (D). It is recommended that students select one of the 3-credit (GB), (GH), (GI) course electives from those that also appear on the approved list of diversity course graduation requirements.
